Questions 11, 12, 13, & 14

Label the strata (layers) of the tropical rainforest diagram below

15. How does each layer/ strata rely on each other? (List at least one example for each layer.)

Examples Info comes from research (enchanted learning)

Forest Floor: provides rich soil + rotten trees to help the trees + vines grow

Place for large animals to live
Understory dark area that has lots of animal and insect life

Canopy: most colorful + lively layer of the rainforest, sun hits here

Emergents - tops of trees, some animal life and insects BIRDS
